Install Clacker on Mac

Version 1.2.1 · Intel Macs

`Clacker-1.2.1-mac-x64.dmg`

CLACKER

1. Install

1. Double-click the **.dmg** file. A window opens showing the Clacker icon and the Applications folder.
2. **Drag Clacker onto Applications.** Wait for the copy to finish, then close the window and eject the disk image (Finder sidebar, or drag it to the Trash).
3. If you already have an older Clacker, macOS asks whether to replace it. Choose **Replace**. That upgrades Clacker; your settings are kept.

2. Open Clacker for the first time

Clacker is not sold through the App Store and is not yet signed with an Apple developer certificate, so macOS asks you to confirm once. This is normal and happens only the first time.

1. Open **Applications** and double-click **Clacker**. If macOS says it cannot verify the app or that it cannot be opened, click **Done** (or OK). Do not move it to the Trash.
2. Open **System Settings** → **Privacy & Security** and scroll down to the Security section.
3. You will see a line saying Clacker was blocked. Click **Open Anyway**, enter your Mac password or use Touch ID, then click **Open**.

> After this, Clacker opens normally every time, from Launchpad, the Dock or Spotlight.

If it still will not open

Open **Terminal** (Spotlight → "Terminal"), paste these two lines and press Return after each:

```
xattr -dr com.apple.quarantine /Applications/Clacker.app
open /Applications/Clacker.app
```

Uninstall

Quit Clacker, then drag **Clacker** from Applications to the Trash. Clacker never stores your texts, so nothing else is left behind.

Good to know

Clacker starts with a blank page and does not save your writing by itself. Use **File** → **Word document, PDF document or Plain text** before you close. Clacker asks you before it closes if there is unexported text.
